INTERVIEW ROOM
Get Comprehensive Interview Coverage

Interview rooms need to be comprehensive, easy to use and highly secure. Getac Video Solutions' rugged Interview Room offers an all-inclusive, end-to-end solution.

Using the VR-X20 as a powerful real-time gateway, video and audio recordings can be merged from multiple sources at once and viewed from different rooms. Recordings are simultaneously sourced to high-performance, solid-state storage. Cataloging is made easy and secure with tags and a full chain of custody, including audit logs, so you can trust that you have the whole story—from start to finish.

Full Windows Experience
The Getac Enterprise Software utilizes a full Windows 10 OS taking advantage of BitLocker, TPM 2.0 Security and Network Approved Imaging to get you the coverage you need.

High Speed
The VR-X20 can be configured with the latest Intel® Core™ i5 or i7 processor, delivering a powerful, high-speed CPU perfect for multitasking and viewing multiple videos simultaneously.

Cameras and Mics
Capture interviews through Full HD IP covert or overt cameras, using Getac low-profile cameras or third-party cameras. Getac's pin hole microphone is easy to install and is nearly invisible to the eye.

Easy-to-Use Interface
Record, monitor, review and export interviews with a simple, intuitive interface that easily integrates with your body-worn cameras and in-car solution, so you can focus solely on capturing the interview.

Easy Storage
Cloud, On-Prem or Stand-alone — Flexible evidence management options through centralized networked storage or completely outside of your network are available for offloading and storing with ease.

Monitoring
Picture-in-Picture displays of multiple rooms and camera perspectives allow your team to monitor interviews remotely from multiple locations so they can be present when key information is shared.
Flagging & Metadata
Mark recordings in real time and store evidence metadata before or after the interview with RFID Login. The VR-X20 is validated to work with many RFID readers for easy access and recording initiation.

High-end Security
The interview room's CJIS-compliant technologies and devices are activated with data encryption and provide full chain-of-custody tracking, including audit logs and role and permission-level security tools.
